SUMMARY
DV Web State Software 4.2.7 has been installed on your system.
The DV Software has been modified to properly calculate high dollar amounts in Benefits Population 12 for extract
files that validate reports after April 1, 2012. This release includes the following changes:

- Software will now add records with accumulated amounts equal to zero or blank when calculating high dollar
counts.

- Software will now accept records with accumulated dollar amounts from prior quarters and no dollar amounts
for the quarter being validated to properly calculate the high dollar amounts in cases where there is a missing
type of overpayment (fraud or nonfraud) in the quarter being validated. The software will not add these
records to the validation counts.

- Software will now calculate high dollar amounts by adding accumulated amounts for only one fraud and one
nonfraud record instead of adding all accumulated amounts.

- Software will now calculate the High Overpayment Count column on the Subpopulation screens correctly by
adding only one accumulated amount in the fraud group and one accumulated amount in the nonfraud group
when comparing the groups to determine which group has the higher amount.

- Calculation of High Dollar Fraud UI (227A/112-4) and High Dollar Non-Fraud UI (227A/113-4) in Report
Validation screen has been modified to allow the special case of a UI claim that was a joint claim in a previous
quarter and has an accumulated federal amount that contributes to a high dollar amount.

- Calculation of Validation Counts on Report Validation screen has been modified by omitting the records that
belong to the previous quarter for Groups 12.02 and 12.03.
