SUMMARY
DV Web State Software 4.2.8 has been installed on your system.

The DV Software has been modified to improve data import performance for all the DV Benefits and Tax populations. This release includes the following changes:

- This release will dramatically speed up duplicate record processing and greatly reduce the likelihood that data files will abort on load because of large number of duplicate records.

- The Benefits Software was updated for Benefits Population 2 by changing an import edit. When the value in the Maximum Weeks field is “Y”, it will now accept records for which the actual weeks of duration are greater than zero instead of requiring that actual weeks be greater than 25.

- The Benefits Software was updated to correct how it determines whether certain Population 3 cases are duplicates or not.

1. Features
