The Benefit Accuracy Measurement (BAM) program is designed to determine the accuracy of paid and denied claims in three major Unemployment Insurance (UI) programs: State UI, Unemployment Compensation for Federal Employees (UCFE), and Unemployment Compensation for Ex-Servicemembers (UCX). State Workforce Agencies (SWAs) select weekly random samples of these program payments and denied claims. BAM investigators audit these paid and denied claims to determine whether the claimant was properly paid or denied eligibility. The results of the BAM statistical samples are used to estimate accuracy rates for the populations of paid and denied claims. In addition, BAM is a diagnostic tool for Federal and SWA staff to use in identifying systemic errors and their causes and in correcting and tracking solutions to these problems.

Readers are strongly cautioned that it may be misleading to compare one state’s payment accuracy rates with another state’s rates. No two states’ written laws, regulations, and policies specifying eligibility conditions are identical, and differences in these conditions influence the potential for error. States have developed many different ways to determine monetary entitlement to UI. Additionally, nonmonetary requirements are, in large part, based on how a state interprets its law. Two states may have identical laws, but may interpret them quite differently. States with stringent or complex provisions tend to have higher improper payment rates than those with simpler, more straightforward provisions (See the 2013 “Comparison of State Unemployment Laws,” http://www.oui.doleta.gov/unemploy/comparison2013.asp).

The Improper Payments Information Act (IPIA) of 2002 and subsequent amendments in the Improper Payments Elimination and Recovery Act (IPERA) of 2010 require agencies to examine the risk of erroneous payments in all programs and activities they administer. An improper payment is defined as any payment that was made to an ineligible recipient, duplicate payments, and payments that are for the incorrect amount -- both overpayments and underpayments, including inappropriate denials of payment or service. Agencies are required to review all programs and activities they administer and identify those that may be susceptible to significant erroneous payments. IPERA defines “significant erroneous payments” as annual erroneous payments exceeding both 2.5 percent of program payments and $10 million. The UI program meets both of these criteria. Additionally, IPERA codifies the requirement for valid statistical estimates of improper payments such as those generated by BAM and compels actions to reduce improper payments. SWAs make all UI payment decisions. Therefore, the U.S. Department of Labor (Department) requires SWAs to review their BAM improper payment data and report their planned activities to prevent, detect, reduce, and recover improper payments in an UI Integrity Action Plan.\(^1\)

The Department reports the overpayment and operational overpayment rates, as well as the underpayment rate to the Office of Management and Budget (OMB)\(^2\), as part of its IPIA.

---

reporting. The IPIA performance year 2013 (IPIA 2013) includes the period July 2012 through June 2013 (Batch Range 201227 through 201326). It is extremely important that BAM accurately measures the level of improper payments so that performance against the targets can be properly evaluated.

UI benefit payments included in BAM in IPIA 2013 decreased to $40.7 billion, compared with nearly $45.2 billion in IPIA year 2012. IPIA 2013 BAM paid claims results are based on the 24,181 sample cases. This represents a completion rate of 99.96 percent. BAM auditors completed claimant interviews in 92.35 percent of the cases. The remaining audits were completed based on information obtained from agency records, the claimants’ former employers, and third-party sources, such as labor unions and private employment agencies (IPIA_2013_Method_Claimant_Information_Obtained.xlsx).

No single measure can reflect all aspects of UI benefit payment integrity. The Department uses eight analytical measures to assess SWA payment accuracy and estimate the risk of erroneous denial of benefits. Individual SWA rates reflect state law, administrative code or rules, and policy. National results reflect all SWA findings (the Virgin Islands are exempt from operating a BAM program due to cost benefit considerations).

**IPIA Improper Payment Rate (9.02%)**

- Effective with the 2012 Annual Fiscal Report, the Department began publishing an improper payments measure that takes into account the “net” effect of UI overpayment recoveries. This net improper payment rate was approved by the Controller of Office of Management and Budget informing the Department that this methodology is consistent with OMB’s IPERA implementing guidance (OMB memorandum M-11-16) and approved the use of this new methodology to begin with FY 2013 reporting. The Department’s new methodology was proposed because it supported good policy – promoting the recovery of improper payments. The net improper payment rate includes two components – total estimated overpayments ($4,477,779,467) plus total estimated underpayments ($203,485,017) – and subtracts the actual amount of overpayments recovered ($1,008,287,658) by state workforce agencies. This net integrity rate is derived from the BAM program estimates of improper payments and the actual recoveries by state agencies as recorded on the ETA 227 report. Nationally, BAM estimates the improperly paid dollars outstanding after recoveries was $3,672,976,826 or 9.02% of the benefits paid.

**BAM Overpayment Rate (11.00%)**

- The overpayment rate is the broadest measure of payments determined to be overpaid. The rate includes fraud, nonfraud recoverable overpayments, nonfraud nonrecoverable overpayments, official action taken to reduce future benefits, and payments that are technically proper due to finality or other rules. The rate excludes payments determined to be “technically” proper due to law/rules requiring formal warnings for unacceptable work search efforts. All causes and responsible parties are included in this rate. When overpayments attributed to another SWA are excluded from individual state results, the overpayment rate is 10.91 percent. Nationally, BAM estimates that

---

3 National rates are based on the IPIA 2013 SWA data; California results do not include mandated National Directory of New Hire crossmatch findings for data collected from July 2012 through December 2012. Several BAM units did not enforce work search requirements according to state laws. This includes Utah which changed a number of improper payments to proper payments and the Department disagrees with the SWA’s action. For certain periods of time New Mexico and New Jersey did not complete an adequate number of cases to produce valid estimates and therefore the state rates have been estimated for a portion of the year.
$4.48 billion in benefit payments were overpaid (including overpayments for which other SWAs were responsible).

**BAM Operational Rate (6.25%)** - The BAM operational overpayment rate includes those overpayments that the states are reasonably expected to detect and establish for recovery -- fraud and nonfraud recoverable overpayments. Therefore the rate excludes work search, employment service (ES) registration, base period wage issues and miscellaneous causes, such as benefits paid during a period of disqualification, redeterminations, and back pay awards. Nationally, BAM estimates the operational rate dollars overpaid were $2.54 billion.

**Agency Responsibility (2.40%)** - This rate includes overpayments for which the SWA was either solely responsible or shared responsibility with claimants, employers, or third parties, such as labor unions or private employment referral agencies. The rate includes fraud, nonfraud recoverable overpayments, nonfraud nonrecoverable overpayments, official action taken to reduce future benefits, and payments that are technically proper due to finality or other rules. When overpayments attributed to another SWA are excluded from individual state results, the agency responsible rate is 2.30 percent. Nationally, BAM estimates SWAs had contributory responsibility for $962.29 million in benefits overpayments.

**Fraud (2.88%)** - The definition of unemployment compensation (UC) fraud varies from state to state. Because fraud determination criteria and thresholds vary throughout the SWAs; the individual state rates reflect these differences. The rate includes all causes and responsible parties. Nationally, BAM estimates that $1.18 billion in benefit payments were fraudulently claimed.

**Underpayment Rate (0.50%)** - This rate includes payments that the BAM investigation determines were underpaid. All causes and responsible parties are included in this rate. It includes errors where additional payment is made or those errors that are technically proper due to finality rules or technically proper due to rules other than finality. As a percentage of UI benefits paid, BAM estimates the underpayment rate was 0.50 percent or $203.49 million.

**Improper Denial Rates** - BAM estimates the adjusted improper denial rates to be 8.85 percent for monetary denials, 5.86 percent for separation denials, and 11.59 percent for nonseparation denials.

For a detailed listing of these rates for each state, click on the following link (note: the spreadsheet may have several pages): [IPIA_2013_Integrity_Rates_All_States.xlsx](link)

Beyond assessing payment and denial accuracy, the objectives of the BAM system includes providing for improvements in program accuracy and integrity, and to encourage more efficient administration of the UI program. Two inconsistencies are apparent in the BAM data. Specifically the data indicates that weaknesses exists in the federal expectation for work search evidentiary fact requirement and issuing alternative base period monetary (re)determination notices under the standard for claim determinations.
I. Paid Claims Accuracy

For each paid UI week investigated, referred to as the Key Week (KW), BAM records whether the payment was proper or improper and, if improper, the type of erroneous payment. Payment errors on the key week are used to generate improper payment estimates. The coding of BAM audit findings is consistent with the laws, rules and written policies of each SWA. BAM captures 110 data elements for each sampled payment or denial (ET 395 Handbook 5th Edition BAM State Operations Guidance). Data for nine of these elements are completed only for erroneous payments or denials. The Department uses these elements to produce the various integrity rates listed.

Each integrity rate represents a different view of the BAM data set. The BAM data construct provides multiple perspectives; and payment errors may be included or excluded for a specific rate (See IPIA 2013 Methodology and Program Description Integrity Rate definitions). The Operational, Fraud, and Agency Responsible Rates are subsets of the overpayment rate.

The following chart summarizes six paid claim accuracy (PCA) rates, which are used for calculating overpayment estimates.

For a detailed listing of these rates for each state, click on the following link (the spreadsheet may have several pages): IPIA 2012 - IPIA 2013 Integrity Rate Changes.xlsx

---

Overpayment and Operational Rate Time Series

The following chart displays the overpayment and operational overpayment rates by calendar quarter. For the period IPIA 2009 to IPIA 2013, the average overpayment rate was 10.58 percent and the average operational rate was 5.96 percent. The chart exhibits the contrast between these two rates and the impact of excluding the payment errors that are considered "not detectable by normal means" or are cost prohibitive to establish and recover.

In contrast to the U.S. graph above, SWA rates show a higher degree of volatility from one quarter to the next. The quarterly volatility is in part due to the smaller sample sizes at the state level, the probability of sampling a given number of weeks with payment errors, and seasonal factors. This volatility is one of the reasons that the Overpayment Detection Core Measure uses three years of BAM data. This demonstrates that SWAs should be cautious in making performance assumptions and judging corrective actions effectiveness based on one single calendar quarter of data.

For a detailed listing of these rates for each state, click on the following link (note: the spreadsheet may have several pages):
IPIA_09_IPIA_13_Overpayment & Operational Overpayment Rates by Quarter & State.xlsx

BAM Operational Overpayment Rate

The BAM operational rate is a component of the performance indicator that measures the detection of recoverable overpayments, which is one of four UI program performance goals that the Employment and Training Administration (ETA) has set as part of its Government Performance and Results Act (GPRA) plan. These GPRA goals reflect the UI program’s
benefit payment, tax, and reemployment facilitation responsibilities.

The overpayment detection measure is also a Core Measure for UI Performs, the UI performance management system. The UI Performs Overpayment Detection Core Measure covers a three-year period, and the GPRA measure is for a one-year period. The measure is defined as the percentage of recoverable, detectable overpayments estimated by BAM that state Benefit Payment Control (BPC) operations establish for recovery.

\[
\text{Overpayment Detection Measure} = \frac{\text{Overpayments Established (BPC)}}{\text{Estimated Overpayments (BAM Operational Rate x benefits paid)}} \times 100
\]

The denominator or operational rate estimate represents that portion of total overpayments that state BPC operations should be able to detect and establish for recovery. The operational rate was developed following an extensive analysis of BAM overpayment data. State and national overpayment detection measure data can be found at the following links:

Core Measure - [http://www.oui.doleta.gov/unemploy/3yr_overpay.asp](http://www.oui.doleta.gov/unemploy/3yr_overpay.asp)

The minimum Acceptable Level of Performance (ALP) for the Detection of Overpayments Core Measure is 50 percent, using a three-year average of the measure. There is also an upper limit to the ALP. When a state exceeds the upper limit of performance of 95 percent, it indicates a problem with the state’s BAM methodology and/or reporting of overpayment established by BPC.

The following section illustrates the cause components of the operational rate and the types of overpayments excluded from the operational rate.

**Operational Overpayments**

Overpayments included in the operational rate constitute 57.5 percent of all UI benefit dollars overpaid in IPITA 2013. Slightly more than half of the operational overpayments involve unreported or misreported benefit year (BY) earnings. Separation issues account for just under one-quarter of the operational overpayments, followed by issues related to the claimant’s ability to work and availability for work (A&A).

As shown in the graph below, the balance of operational overpayments include such cause categories as “Other Eligibility," deductible income, and dependent allowance issues. The “Other Eligibility” category includes refusal of suitable work, self-employment, alien status, identity theft, and reporting issues (failure to appear as requested by the SWA to provide information related to the UI claim). “Deductible Income” issues include benefit eligibility determinations involving the impact of payments received by the claimant such as severance pay, vacation pay, or pension (Sev/Vac/SSI/Pen.). A number of states provide additional benefits for claimants with dependents and thus “Dependants” issues may cause improper payments.
Overpayments Excluded from the Operational Rate

Several overpayment causes are excluded from the operational rate because either: 1) SWAs are unlikely to detect these overpayments through the methods commonly employed by BPC (for example, crossmatches of UI claimant Social Security Numbers with wage record and New Hire Directory data, appeals reversals, and tips or leads); or 2) the cost of pursuing these overpayment errors exceeds the amount of benefits that can be recovered. Work search issues (55.5 percent of all excluded overpayments), base period wage issues (representing slightly more than 10.5 percent, and Employment Service registration issues involving 9.85 percent of all excluded overpayments constitute the majority of the excluded causes.
After the exclusions by cause, the residual 10.3 percent of UI overpayments excluded from the operational rate are found unrecoverable, because either: 1) the time that has elapsed between the overpayment and its detection exceeds the period established in state law in which an erroneous payment can be recovered; or 2) responsibility for the improper payment error rests with the agency, employer, or third party, and not the claimant; or 3) state law prohibits the SWA from re-determining an issue that has been previously addressed (finality rule); or the establishment and recovery of the would be against the standard of equity and good consciousness. Most of these nonrecoverable overpayments are separation or continued eligibility issues, such as the requirement that the claimant is able and available for work.

For a detailed listing of these rates for each state, click on the following link (note: the spreadsheet may have several pages):

IPIA_2013_Overpayment_Causes_Included_&_Excluded_from_the_Operational_Rate.xlsx

### Overpayment Cause by Integrity Rate

The UI initial qualification and continuing eligibility requirements are complex. Benefit payments are limited to weekly and maximum benefit amounts. Benefits are restricted to a specific time period (benefit year). Claimant turnover is high with finite duration and opportunities to return to employment. This complexity lends itself to improper payments; therefore the causes of these improper payments are diverse. Errors can occur at any of the process points discussed below. However, an error may or may not make the key week improperly paid. If the error does not affect the key week payment, then it is excluded from the integrity rate estimates.

All states require that a claimant must have earned a specified amount of wages or must have worked a certain number of weeks or calendar quarters in covered employment, or must have met some combination of the wage and employment requirements within his/her base period, to qualify for benefits. The purpose of such qualifying requirements is to restrict benefits to covered workers who are genuinely attached to the labor force.

All state laws provide that, to receive benefits, a claimant must be free from disqualification for actions such as voluntary leaving work without good cause, or discharge for misconduct connected with the work, or refusal of suitable work. Such disqualifying actions may occur prior to the initial application or claim for benefits or at any point during the benefit year. The purpose of these provisions is to limit payments to workers unemployed primarily as a result of economic causes.

All state laws provide that, to receive benefits, a claimant must meet week-to-week eligibility requirements. Claimants certify their weekly eligibility status when claiming benefits. The general rule is that claimants must be able to work, available for work, registered for employment services, report when directed to the agency, and actively seek work. Some states provide dependent allowances in certain instances. Finally, claimants may be subject to a reduction in benefit amounts payable based on any benefit year earnings (partial employment) or deductible income received (i.e. pension, vacation pay, severance payments).

To determine improper payments and their causes, the BAM program - as a statistical survey -
uses standardized questionnaires to gather information. The BAM investigator applies all facets of state law, administrative code and official policy to the case findings to determine whether a key week payment is proper or improper. Although the legal basis for determining whether a payment is proper or improper may be different from state to state, the causes of errors are common across the nation.

The distribution of the causes for UI overpayments varies considerably among the four overpayment integrity rates. The elements included or excluded from the various rates influence this distribution (See [IPIA_2013_Methodology_and_Program_Description](http://wdr.doleta.gov/directives/attach/ETHHandbook_395_Ch5_acc.pdf) Integrity Rate definitions for inclusion or exclusion from various rates).

<td>Percent of Total $ Overpaid</td>
<td>34.61%</td>
<td>58.87%</td>
<td>73.64%</td>
<td>13.80%</td>
</tr>
</tbody>
</table>

As displayed in the IPIA 2013 Overpayment Cause By Integrity Rate table, unreported or misreported benefit year earnings are the leading cause of UI overpayments. They account for almost three-quarters (73.64 percent) of UI fraud overpayments, over half (58.87 percent) of the overpayments defined by the operational rate, and slightly more than a third (34.61 percent) of the overpayments included in the overpayment rate, but only slightly more than a seventh (13.80 percent) of the amount overpaid for which the agency had full or partial responsibility.

The UI system is designed to maintain and to encourage claimant attachment to workforce overall and/or to their previous employers in particular. The system does this by allowing partial payments, which are reduced for benefit year earnings (weekly benefit amount reduced as a result of wages, commissions, bonuses, tips or gratuities, odd jobs or self-employment income) and through workshare programs. Because UI benefits only replace a portion of the claimant’s previous base period wages, states have devised various earnings disregard and benefit reduction provisions. Ultimately, these payment adjustments require accurate reporting of these benefit year earnings.

Generally claimants are required to report this income when earned - not when paid, and claimants are required to report gross earnings - not net earnings. This benefit year earnings reporting procedure is part of the continued claimstaking process (See claim filing methods by state [IPIA_2013_Claim_Filing_Methods.xlsx](#)).

BAM collects data for several important UI eligibility criteria before and after the BAM investigation. Claimant earnings and adjustments to the claimant’s weekly benefit amount (WBA) for the paid week (referred to as the key week) investigated by BAM can produce useful information related to benefit year earning (BYE) improper payments. The following table summarizes the earnings and adjustments data after the BAM investigation, that is, it compares the information at the time the claimant received benefits to the findings after the investigation. In IPIA 2013, the BAM program reviewed 24,181 key weeks. For these 24,181 paid weeks, 2,583 or 10.68 percent of the weeks investigated had benefit year earnings reported at the time of payment. For these 24,181 paid weeks, 21,598 or 89.32 percent of the weeks investigated had no benefit year earnings reported at the time of payment.

---

7 Work Share: An alternative to employee layoffs, whereby a group of workers simply work shorter work weeks and are compensated for their lost work time with partial benefits. Workshare program payments are excluded from the BAM sample because many states tend to waive normal eligibility requirements.

<td>Average unreported or concealed BYE amount in the key week</td>
</tr>
<tr>
<td>$407.67</td>
<td>Median unreported or concealed BYE amount in the key week</td>
</tr>
</tbody>
</table>

Slightly less than 50 percent (1,284 weeks) of the 2,583 key weeks with benefit year earnings initially reported actually had the earnings reported accurately. However, 933 weeks, representing 36.12 percent of the weeks with earnings initially reported, had under reported earnings (claimant earned more than reported), and 366 weeks (14.17 percent) of the weeks had over reported earnings (claimant earned less than reported).

Additionally, investigators found 880 weeks or 4.07 percent of the 21,598 weeks with no benefit year earnings initially reported actually had earnings income. More than 88 percent of these cases had benefits amounts decreased or reduced completely because the claimant was found to be working part or full time.

These findings with respect to claimant earnings affect the accuracy of adjustments to the claimant’s WBA. Furthermore, claimants’ accurate reporting of benefit year earnings and timely earning verification with employers are essential in preventing, identifying, and reducing these types of improper payments.
Work Search Issues

<table>
<thead>
<tr>
<th>Cause Work Search Issues</th>
<th>Overpayment</th>
<th>Operational Rate</th>
<th>Fraud Rate</th>
<th>Agency Responsible</th>
</tr>
</thead>
<tbody>
<tr>
<td>Estimated Amount by Cause</td>

</tr>
<tr>
<td>Percent of Total $ Overpaid</td>
<td>24.33%</td>
<td>N/A</td>
<td>1.90%</td>
<td>5.17%</td>
</tr>
</tbody>
</table>

As displayed in the IPIA 2013 Overpayment Cause By Integrity Rate table, work search issues are the second leading cause for the broadest measure of overpayments (overpayment rate of 24.33 percent) but are not a significant cause of either fraud overpayments (1.90 percent) or overpayments for which the agency had full or partial responsibility (5.17 percent). As discussed above in the operational rate section, work search issues are excluded from that rate. Claimants were required to conduct a work search in 18,890 of 24,181 (or 78 percent) of the cases reviewed. The remaining claimants were exempt from the work search requirements for such reasons as being on a temporary layoff or being a member of a union with a hiring hall or in approved training, etc.

The UI program helps workers weather economic downturns by providing wage replacement benefits to eligible individuals. The program is designed to be a temporary support until workers are able to find new employment. A key principle of the program is, therefore, that claimants are actively attempting to obtain employment. However, the Department’s contemporaneous interpretation of the original Social Security Act (SSA) in 1935 was that Federal law does not require a work search for the regular UC program. In fact, current Federal regulation in 20 CFR 604.5(h) provides: “The requirement that an individual be available for work does not require an active search for work on the part of the individual. States may, however, require an individual to be actively seeking work to be considered available for work, or states may impose a separate requirement that the individual must actively seek work.”

IPIA 2013 (July 1, 2012 through June 30, 2013) represents a transitional year in the Federal work search requirement. The Middle Class Tax Relief and Job Creation Act of 2012 (Public Law 112-96), enacted on February 22, 2012, added a new paragraph (12) to section 303(a) of the Social Security Act, to require that a state’s law, as a condition of UC administrative grants, provide that “as a condition of eligibility for regular compensation for any week [emphasis added], a claimant must be able to work, available to work, and actively seeking work.” The law is applicable to weeks beginning after the end of the first session of the State legislature which begins after February 22, 2012. Consequently, states which did not have active work search provisions were required to enact laws and enforce such requirements as a condition of eligibility for any week compensated.

UIPL No. 05-13, issued January 10, 2013, provides “Federal UC law does not specifically define ‘actively seeking work,’ states have some discretion to establish a reasonable definition. States will exercise their discretion consistent with the strong expectation that UC beneficiaries will be engaged in concerted and effective efforts calculated to find a suitable job in the

---

8 Federal Register /Vol. 72, No. 9 /Tuesday, January 16, 2007 /Rules and Regulations p. 1891
9 [http://www.ssa.gov/OP_Home/ssact/title03/0303.htm](http://www.ssa.gov/OP_Home/ssact/title03/0303.htm)
shortest period of time that is practicable.”

Thus, states are provided tremendous leeway in meeting this conformity requirement.

States have devised various work search standards. In many states, claimants must make a minimum number of employer contacts each week. Within a state there may be differences on the number of contacts required based on local labor market characteristics while in other states the number of contacts is standard throughout the SWA. Some of these states may allow certain activities such as completing job search seminars or networking to be considered acceptable work search activities. Depending on occupation, some states require claimants to contact the employer in person. As a condition of eligibility, many states require a claimant to maintain a log of weekly work search contacts and provide the record for verification purposes. Some states allow a claimant to simply attest without presenting any tangible evidence that they have made an active search for work. A few states use a work search standard of what a reasonable and prudent person in a similar situation would do in order to return to work. As with the work search standards, enforcement varies considerably from state to state.

As a result of these diverse work search eligibility standards, there is tremendous work search error rate variability among states. A lower error rate could reflect a higher rate of work search compliance within the state (which in turn could be due either to greater search efforts by claimants or to less stringent requirements for work search), greater leniency by an SWA in the circumstances under which it considers claimants’ lack of compliance in work search or reporting as constituting an improper payment, varying SWA standards for verification of claimant provided contacts/activities, differences in how BAM audits are conducted, or the SWA BAM program’s failure to consistently apply state laws in evaluating its cases.

The BAM program captures seven data elements to assist the state investigators in determining claimant work search compliance. Claimants are asked about their work search efforts in question 42 on the claimant questionnaire (ET Handbook No. 395, 5th Edition, Appendix B, page 5). Detailed listings of these elements for each state (for those claimants are required to actively seek work) can be found in the attached spreadsheet: IPIA_2013_Work_Search_Verification_Outcomes.xlsx

Several things are apparent in the detail data:

- For over 18 percent of all key weeks investigated where the claimants were required to conduct an active work search, the claimants did not or could not provide employer contacts or work search activities for verification.
- For eligibility determination purposes it appears that claimants are often given the benefit of doubt when they indicate they do not know the contacts made or activities completed for the week being reviewed.
- When the claimant fails to respond to the BAM investigation, some states reach a conclusion that the claimant made an active work search despite the fact that the individual has not met work search documentation requirements specified in eligibility policy.
- Some states are not complying with state law, administrative code/rules and policies dealing when coding work search compliance and improper payments.

---

10 http://wdr.doleta.gov/directives/attach/UIPL/UIPL_No_5_13_Acc.pdf
These differences include definitions of the work search effort that UI claimants are required to undertake, divergences in the claimant requirements to record and report their efforts, and disparities in the SWAs’ efforts to verify and enforce adherence to requirements. The states also differ in the conditions under which they categorize a claimant’s noncompliance with work search requirements and or failure to maintain a record or log of work search contact and activities as an improper payment. Those policies and practices are complex or nuanced or sometimes intentionally not well documented. Finally, states may assert formal warning policies which have not been publicized or which conflict with other operational guidance.

The IPERA requires federal agencies to produce a statistically valid estimate of improper payments. The BAM program is ETA’s tool for accomplishing this requirement. However, the Department has found instances where BAM units are not complying with the program requirements, identified inconsistencies between BAM coding of work search outcomes and state official policy (particularly when a claimant fails to respond), and found evidence that some investigators have not met the BAM level of effort to obtain information standard. These administrative findings affect the accuracy of the improper payment estimates generated from the results of the BAM survey.

### Separation Issues

<td>16.64%</td>
<td>40.29%</td>
</tr>
</tbody>
</table>

As displayed in the IPIA 2013 Overpayment Cause By Integrity Rate table, issues involving the claimant’s reasons for separating from work (separation issues) are the third leading cause of UI overpayments. They account for 19.48 percent of the overpayment rate, 23.29 percent of the operational overpayments, and 16.64 percent of the fraud overpayments. However, separation issues are the leading cause (40.29 percent) of the amount overpaid for which the agency had full or partial responsibility.

Being involuntarily unemployed – that is, the claimant is unemployed through no fault of their own - is a basic eligibility requirement. All state laws provide that, to receive benefits, a claimant must be free from disqualification for such acts as voluntary leaving work without good cause, or discharge for misconduct connected with the work. Such disqualifying acts may occur prior to the initial claim for benefits or at any point during the benefit year. The SWAs have the crucial responsibility of identifying and pursuing separation issues, conducting fair and impartial fact finding hearings, and determining whether the employment separation is disqualifying. Separation fact finding hearings involve input from both employers and claimants and the facts may be disputed. The Benefits Timeliness and Quality (BTQ) guide sheets 1 and 2 in the ET Handbook No. 301, 5th Edition, show the complexities of fact finding and the central role SWAs play in determining eligibility. However, the process demands employers and claimants provide complete and timely facts to separation adjudicators so the state can appropriately apply the law.

The SWA’s central role in separation eligibility determinations is reflected in the agency responsible rate. BAM investigators found separation errors in 651 of the 24,181 cases
investigated. In 288 (or 44.2 percent) of the 651 separation error cases, the SWA’s action or inaction contributed to the error. But in only 106 (or 37.5 percent) of the 288 cases did the agency have exclusive responsibility; in the remaining 182 cases the agency shared responsibility with another party.

Although the BTQ data does not determine whether a payment is proper or improper, it does reflect the BAM program’s assignment of agency responsibility. The table below shows the BAM program’s finding for “allow payment separation determinations”.

Further insight is gained on improper payments due to separation issues by examining the sections Agency Action Prior to Sample Selection for Overpayments, Employer Action Prior to Sample Selection for Overpayments, and Claimant Action Prior to Sample Selection for Overpayments.

**Overpayment Responsibility by Integrity Rate**

The BAM program identifies the party or parties responsible for all payment errors. As with cause, the distribution of overpayment responsibility varies considerably by integrity rate. A fundamental aspect of payment “when due,” for purposes of Section 303(a)(1), SSA, is that UC is due to claimants who are eligible under state law. Eligibility for UC is determined on a week-by-week basis. During a continued claim series, a claimant must certify continuing eligibility for each week. If information provided by the claimant or others establishes eligibility, the state agency manifests its determination of eligibility for that week by issuing compensation to the claimant. Once initial eligibility is established, the SWA must make continued payments unless a question concerning continued eligibility for benefits for a given week arises. Then the SWA is required to conduct an investigation of the facts and makes a determination of eligibility or ineligibility.12

The overpayment rate is the broadest measure of overpayments. Because claimants control much of the information used to determine weekly eligibility, they alone were responsible for almost 65 percent of the dollars overpaid included in the overpayment rate. Errors resulting in overpayments that were attributed exclusively to the SWA accounted for 8.1 percent of the amount overpaid. The claimant and agency were jointly responsible for an additional 8.4 percent of the dollars overpaid, and the claimant and employer were jointly responsible for an additional 9.0 percent of the annual rate overpayments.

---

Claimants alone were responsible for 68 percent of the amount overpaid included in the operational rate. The claimant and agency were jointly responsible for 10.2 percent of the UI benefits overpaid under the operational rate definition, and the claimant and employer were jointly responsible for an additional 12.4 percent of the operational rate overpayments.

Claimants alone were responsible for 75 percent of the fraud overpayments. Claimants along with employers or agencies were responsible for nearly all of the remainder.

* Less than 5 percent of the overpayments were classified as this responsibility.

The agency rate is defined by responsible party. The SWA was solely responsible for 38.1 percent of the amount overpaid included in the agency rate. Agencies shared responsibility with claimants, employers, or third parties for the remainder.

For a detailed listing of these rates for each state, click on the following links (note: spreadsheets may have several pages):
IPIA_2013_Integrity_Rates_by_Responsibility.xlsx
IPIA_2013_Overpayment_Rate_Cause_and_Responsibility.xlsx

**Claimant Action Prior to Sample Selection for Overpayments**

In the case of payment errors, BAM identifies the action that the claimant took prior to the sample’s selection. Prior claimant action provides additional details on improper payment responsibility and helps prioritize ways to prevent, reduce, and detect overpayments.

Claimants provide most of the information that agencies use in determining eligibility for UI benefits. Initial eligibility is determined using claimant and/or employer information to establish monetary eligibility. Claimants must have had sufficient employment attachment and wages to
be monetarily eligible. Along with monetary requirements, each state’s UI law requires workers to meet nonmonetary requirements. Federal law mandates some of these requirements. The general rule is that workers must have lost their jobs through no fault of their own and must be able to work, available for work, and actively seeking work.

Continuing eligibility for UI is determined on a week-by-week basis. During a continued claim series, a claimant must certify their continuing eligibility for each week. Errors can occur anywhere in this business process. BAM assigns a code to indicate action(s) taken by the claimant affecting the payment error issue by recording the following actions:

- Claimant provided adequate and timely information to SWA for determination.
- Claimant provided adequate information to SWA after due date for determination.
- Claimant provided timely but inadequate information to SWA for determination.
- Claimant provided inadequate/incorrect information to SWA after due date for determination.
- Claimant did not respond to SWA request for information.
- SWA did not request the claimant to provide information.

Depending on the cause, BAM often finds claimants responsible for overpayments because they are a principal source of information. Prior claimant action provides insight into this coding. For example, in 88.9 percent of the benefit year earnings overpayments and 60.5 percent of the separation issues overpayments, the claimant provided inadequate but timely information contributing to $1.9 billion overpaid in these two cause categories. Also, this shows the importance of verifying separation and earnings information with employers and the conduct of those actions.

For a detailed listing of this rate, click on the following link (note: the spreadsheet may have several pages): [IPIA_2013_Cause_x_Prior_Claimant_Action.xlsx](#)

---

**Agency Action Prior to Sample Selection for Overpayments**

In the case of payment errors, BAM identifies the action that the SWA took prior to the sample’s selection. Prior agency action provides additional details on improper payment responsibility and helps prioritize ways to prevent, reduce, and detect overpayments. At the time the SWA made payment, BAM found most overpayments were not detectable through normal agency procedures. For example, 78.32 percent of the operational rate’s $2.54 billion overpaid were not detectable without the agency taking special actions.

However, BAM determined that 21.68 percent of the operational overpayments were detectable at the time the payment was made. BAM found that at the time the sample was selected the agency had resolved or was in the process of resolving just under 3.59 percent of the operational overpayments and identified an additional 1.00% percent of benefit year earnings or separation overpayments through crossmatch with new hire or wage records investigation. For the remainder (17.09 percent or $434.8 million) of the operational dollars overpaid, the agency had sufficient information to identify the overpayment issue but did not resolve the issue, identified the overpayment issue but took the incorrect action, or did not follow the prescribed procedures thereby precluding the SWA’s ability to detect the error.
Eighty-four percent of the overpayments determined to be due to fraud were not detectable through normal agency procedures at the time the payment was made. Again, BAM found that special agency actions (e.g. crossmatching with the National Directory of New Hires or taking additional steps to secure employer information) were required to prevent or detect these overpayments. The remaining fraud overpayments were distributed among the other prior agency action categories similar to the operational overpayments.

For overpayments included in the overpayment rate, just more than 76.6 percent of the 4.78 billion dollars of UI benefits overpaid was not detectable through normal agency procedures. The agency had sufficient information but did not resolve the issue for 8.77 percent of the amount overpaid, and the agency identified the overpayment issue but took the incorrect action for 6.2 percent of dollars overpaid. The agency failed to follow its own procedures, which precluded the ability to prevent the overpayment, for 3.72 percent of the annual rate dollars overpaid. At the time BAM selected the sample, the agency had resolved or was in the process of resolving improper payments constituting 2.72 percent of the amount overpaid. Additionally, the agency identified 0.60 percent of these overpayments using crossmatches. Finally, a small portion of dollars overpaid are caused by another SWA (0.91 percent).

For the agency rate, BAM determined SWAs were responsible for $978.6 million because they had full or partial responsibility for the overpayment. Of these, the agency had sufficient
information to identify the overpayment issue but did not resolve the issue for 40.48 percent of the amount overpaid; took the incorrect action for 29.86 percent, and did not follow procedures thereby precluding the SWA’s ability to detect the payment error for 17.58 percent of the amount overpaid. The remaining overpayments for which the agency had full or partial responsibility were either not detectable through normal procedures at the time the payment was made or the agency had resolved or was in the process of resolving improper payments or the error was committed by another SWA.

For a detailed listing of these rates for each state, click on the following links (note: spreadsheets may have several pages):
IPIA_2013_ Integrity_Rates_Cause_x_Prior_Agency_Action.xlsx

### Employer Action Prior to Sample Selection for Overpayments

In the case of payment errors, BAM identifies the action that the employer took before the payment was selected for the BAM sample. Prior employer action provides additional details on improper payment responsibility and helps prioritize ways to prevent, reduce, and detect overpayments. As discussed in the previous section, BAM considers a large majority of the overpayments included in the overpayment rate, operational rate, and fraud rate to be undetectable by the agencies during their usual payment administration processes, and thus prohibitively expensive for the agency to prevent. However, BAM detects the majority of its payment errors through the verification of claim information with employers.

Although claimants provide most of the information that agencies use in determining eligibility for UI benefits, employers also provide critical information to the agencies. Employers provide wage information, which is used to calculate the claimants’ monetary eligibility and weekly benefit payments. Employers respond to notices of new initial and additional claims by providing information on the reason for the claimant’s separation from work. Employers submit notices of new hire, which agencies use to detect claims filed by individuals who have returned to work. Employers also provide detailed information that may corroborate or contradict claimant provided information on issues that affect eligibility, such as information concerning availability for work, work search, job refusal and benefit year earnings.

BAM data show that prior employer action is a critical factor in the agency’s ability to prevent or detect many overpayments. BAM assigns a code to indicate action(s) taken by the employer affecting the payment error issue and records the following employer actions:

- Employer provided adequate information to SWA in a timely manner for the payment determination.
- Employer provided adequate information after due date for payment determination.
- Employer provided inadequate/incorrect information in a timely manner for payment determination.
- Employer provided inadequate/incorrect information after due date for payment determination.
- Employer did not respond to request for information.
- Employer did not report claimant as a “New Hire” as required by law.
• Employer, as an interested party, was not requested by agency to provide information for determination.
• Not an employer-related issue.

Because the state agency uses employer provided information in its eligibility determinations, the accuracy and timeliness of this information affect whether benefits were properly paid. Five of these actions may lead to improper payments. The following table displays prior employer actions for each of the integrity rates.

BAM estimates that employer actions contribute 17.73 percent of the overpayments included in the overpayment rate, 16.89 percent of the operational rate dollars overpaid, 12.91 percent to the fraud rate dollars overpaid, and 20.94 percent of the overpayments included in the agency responsible rate. The highlighted sections show estimated overpayments where a different employer action in response to a claim may have produced a different outcome.

For example, over $413.7 million overpaid in the annual rate involved verification difficulties dealing with employment separations. An additional $130.6 million overpaid involved employer verification problems and benefit year earnings. These overpayments may have been prevented or reduced if timely or accurate information had been provided.

| Estimated dollars overpaid where a different employer action may have produced a different outcome | $793,972,605 | $429,670,692 | $151,419,394 | $204,934,687 |
| Percent of Total Dollars overpaid where a different employer action may have produced a different outcome | 17.73% | 16.89% | 12.91% | 20.94% |
| Total Estimated Overpaid                                       | $4,477,779,469 | $2,543,829,366 | $1,172,732,403 | $978,599,714 |

One element stands out in the agency responsible error rate. For 9.3 percent of the total dollars overpaid or approximately $91.3 million, BAM found that the SWAs did not request information from employers who were an interested party to a determination.
Overall, BAM data shows that prior employer participation is an essential factor in the prevention or detection of many overpayments.

For a detailed listing of these rates for each state, click on the following links (note: spreadsheets may have several pages):
IPIA_2013_Integrity_Rates_Cause_x_Prior_Employer_Action.xlsx

**Point of Detection**

BAM records the point in its audit process at which it first detects a payment error. BAM detects most payment errors by verifying base period wages, benefit year earnings, and separation information with employers. The data suggest that taking additional steps to secure employer information or to conduct more in-depth claimant interviews may influence overpayment amounts. For example, a cross tabulation displaying the joint distribution of the point of detection and overpayment cause shows that BAM found significant errors when payment information is corroborated with employers and through extensive claimant interviews.

<table>
<thead>
<tr>
<th>Point of Detection - Overpayment rate</th>

</tr>
</tbody>
</table>

BAM identified an additional $723,078,364 of overpayments in agency “UI Records.” Such overpayments may be displayed as erroneous prior agency actions.

<table>

<td>$392,798,089</td>
</tr>
</tbody>
</table>

This information taken together suggests that inadequate staff training and insufficient investigational time may be issues contributing to benefits being improperly paid. Also, benefit system limitations might influence these agency actions.

Within this framework, it is important to note that the audit process differs substantially from normal UI operations in terms of cost, time, and effort. BAM exhausts all avenues in obtaining information while UI operations make reasonable attempts. This procedural difference may contribute to BAM identifying some of these overpayments. However, Section 303(a)(1) of the SSA requires "[s]uch methods of administration . . . to insure full payment of unemployment compensation when due." Application of this "when due" provision requires the balancing of the dual concerns of promptness and accuracy. The Department has always interpreted "when due" to include accuracy to ensure that payments are not made when they are not due.

BAM identified an estimated $290.2 million in benefit year earnings and $41.8 million in separation overpayments using the National Directory of New Hires (NDNH) crossmatch. These overpayments are identified with a specific detection point code. BAM also captures
whether the agency had identified the overpayment at the time of sample selection. In many cases, the SWA has not taken action on the new hire hit when BAM selects its case. This strongly suggests that SWA should review and improve their crossmatch workflow processes and adjust their crossmatch parameters. The following spreadsheet shows these results by state for benefit year earning and separation overpayments:

IPIA_2013_BAM_&_SWA_NDNH-SDNH_Crossmatch_Detections_on_cases.xlsx

Aggregate IPIA 2013 Point of Detection data for all states are displayed in the following chart.

For a detailed listing of these rates for each state, click on the following links (note: spreadsheets may have several pages):

IPIA_2013_Integrity_Rates_by_Point_of_Detection.xlsx

Key Week Action Rates

For each paid UI week investigated, referred to as the Key Week (KW), BAM records whether the payment was proper or improper and, if improper, the type of erroneous payment. The coding of BAM audit findings must be consistent with the laws, rules and written policies of the
SWA. The Department uses these KW action codes to develop the payment integrity rates discussed throughout this paid claim accuracy analysis. These integrity rates are defined in IPIA 2013 Methodology and Program Description.

Differences in state laws are highlighted by the KW action rates. For example, work search requirements differ significantly in that some states require a formal warning before holding a claimant ineligible. Another example involves states with legal provisions making determinations final or unchangeable after a given period. States may also differ in the way they interpret and apply seemingly identical work search and other UI eligibility requirements. SWA administrators and legislators may use KW action error overpayment rates in setting policy priorities or identifying procedural constraints that affect claimstaking or limit overpayment establishment. Aggregate IPIA 2013 data for all states are displayed in the chart above.

Key Week Action state-level data highlights how state laws vary and why integrity rates are displayed with warnings not to compare individual state rates.

For a detailed listing of these rates for each state, click on the following link (note: the spreadsheet may have several pages): IPIA 2013 Key Week Action Improper Payments.xlsx
II. Underpayments and Denied Claims Accuracy

Underpayment Rate

IPIA requires estimates of underpayment rates, in addition to overpayments. BAM estimates that $203.5 million was underpaid in IPIA 2013, compared with $275.6 million underpaid in IPIA 2012. As a percentage of UI benefits paid, the IPIA 2013 national underpayment rate of 0.50 percent is slightly lower than the IPIA 2012 rate of 0.61 percent. State underpayments ranged from 0.01 percent in Florida to 1.50 percent in Iowa.

Errors in reporting or recording base period wages accounted for slightly less than 55 percent of the amount underpaid, and represented 0.27 percent of the amount of UI benefits paid. Employers report employee wages to SWAs each calendar quarter. SWAs use these wages to establish a claimant’s base period, which in turn is used in the calculation of weekly benefit amounts and maximum benefit amounts (see IPIA_2013_Base_Period_Wages_Report.xlsx for individual state findings). Instances where the weekly benefit amount increases after the investigation represent underpayments used to produce the estimate.

<table>

Understated

- Number of cases where base period wages (BPW) before were less than the base period wages after investigation (e3 < e4),
- Number of cases where the weekly benefit amount (WBA) before investigation was less than the weekly benefit amount after investigation (e9 < e10),
- Number of cases where the maximum benefit amount (MBA) before investigation was less than the maximum benefit amount after investigation (e11 < e12)

Overstated - Number of cases where “e3 > e4” for BPW, “e9 > e10” for WBA, and “e11 > e12” for MBA.
Errors in reporting or recording benefit year earnings were the second leading cause of underpayments – 27.5 percent of all underpayments and 0.13 percent of UI benefits paid. Generally, claimants can work and earn wages while collecting UI benefits as long as they report their earnings. However, weekly UI payments may be adjusted downward based on claimant reported earnings. For many of these underpayments, the claimant may have over reported their weekly earnings and because of this error, BAM found that UI benefit amount paid was too small.

<table>
<thead>

</tr>
<tr>
<td>$20.00</td>
</tr>
</tbody>
</table>

Employers alone were responsible for slightly more than 22 percent of amount underpaid, which represented 0.11 percent of the amount of UI benefits paid. Claimants alone were responsible for an additional 38.2 percent of the amount underpaid, which represented 0.19 percent of the amount of UI benefits paid. Because SWAs often send out confirmations to the claimant and base period employers at the time of monetary determination, responsibility for these types of underpayments are highly distributed.

For a detailed listing of these rates for each state, click on the following link (note: the spreadsheet may have several pages):
IPIA 2013 Underpayment Rates & US Cause and Responsibility.xlsx

The underpayments estimated from BAM paid claims samples represent underpayments only for those claimants eligible for UC. Underpayments also result when claims for UI are erroneously denied. Each week, BAM units in the SWAs select samples of denied UI claims from three populations, defined by the type of issue on which a benefit denial was based -- monetary, separation, and nonseparation (continued claim filing eligibility). Denied Claim
Accuracy (DCA) measures the accuracy of disqualifying monetary, separation, and nonseparation determinations for both intrastate and interstate claims.

**Denied Claims Accuracy Rates**

Unlike the investigation of paid claims, in which all prior determinations affecting claimant eligibility for the compensated week are evaluated, the investigation of denied claims is limited to the issue upon which the denial determination is based. DCA investigators verify facts contained in the case file, obtain any missing information, and conduct new and original fact-finding that may be relevant to the denials determination. The DCA audits record error information in a manner similar to paid claim accuracy: Dollar Amount of Error, Error Issue Action Code, Error Cause, Error Responsibility, Error Detection Point, Prior Agency Action, Prior Employer Action, DCA Action Appealed, and Prior Claimant Action.

**Monetary Denials**

SWAs determine the monetary eligibility of claimants when they file a new initial claim or a transitional claim (to establish a new benefit year). In IPIA 2013, SWAs determined that 82.35 percent of the 13.46 million new initial and transitional claims were monetarily eligible.

BAM estimates that 12.04 percent of the 1.63 million monetary denials included in the BAM DCA population were improper. This compares to an improper denial rate of 10.98 percent in IPIA 2012. These UI claims were denied because the agency had initially determined that the claimant had not earned sufficient wages in employment prior to being unemployed or failed to meet other requirements for monetary eligibility, such as sufficient earnings in a minimum number of weeks. The BAM DCA audit identified additional wage credits or an alternate or extended base period for these claimants that had not been included in the original monetary determination or identified other errors in the original determination.

For many of these improper monetary denials, the SWA had identified the additional wages and issued a redetermination establishing eligibility independent of the BAM investigation, or the initial denial was reversed on appeal. When the improper monetary denial rate is adjusted for these agency initiated redeterminations or appeals reversals, the improper denial rate for monetary determinations drops to 8.85 percent. This represents approximately 144,212 of the 1.63 million claimants who were monetarily denied. This rate is slightly higher than the adjusted improper denial rate of 8.22 percent in IPIA 2012.

**Separation Denials**

In order to be eligible for UC, claimants must be unemployed due to no fault of their own, discharged for non-disqualifying reasons, or must have voluntarily left employment for a non-disqualifying reason provided in state law, such as workplace harassment, unsafe working conditions, domestic violence, or to relocate with a spouse. Agencies conduct determinations of eligibility when a separation issue has been identified. The agency gathers information from the claimant, employer, and relevant third parties. Based on the findings of fact and the application of state laws, SWAs issue a determination of eligibility.

Separation issues normally are identified when a new initial claim or an additional claim is filed. In IPIA 2013, there were approximately 11.08 million monetarily eligible new initial claims and
approximately 6.74 million additional claims. No separation determinations were conducted for nearly 77.1 percent of these claims, because the reason for separation was lack of work or reduction in workforce. SWAs completed slightly more than 4.08 million separation investigations and found disqualifying circumstances in 2.05 million of these determinations that resulted in denial of benefits.

In IPIA 2013, BAM estimated that 10.49 percent of the 1.95 million separation denials included in the BAM DCA population were improper, compared with 9.75 percent estimated for IPIA 2012. When redeterminations and appeals reversals are taken into account, the improper denial rate for separations decreases to 5.86 percent, compared with 6.27 percent in IPIA 2012. Nationally, BAM estimates that approximately 114,441 of the 1.95 million employment separation denials subject to audit were incorrectly denied benefits.

Nonseparation Denials

Nonseparation issues include the claimant’s ability to work and availability for work, disqualifying and unreported earnings and income during the benefit year, failure to meet work search requirements, and failure to report as required by the SWA to provide information related to the UI claim or to receive reemployment services. There is often a distinction between issues that result in disqualification and issues that result in a specific number of weeks of ineligibility. A disqualified claimant has no right to benefits until s/he requalifies, usually by obtaining new work or by serving an established disqualification period. In some cases, benefits and wage credits may be reduced. An ineligible worker is prohibited from receiving benefits until the condition causing the ineligibility ceases to exist. Eligibility issues are generally determined on a week-by-week basis. Although nonseparation issues can be detected at various points in the UI claims taking process, these issues generally affect the claimant’s eligibility for continued claims of UI.

In IPIA 2013 claimants requested payment or “claimed” 162.24 million weeks of benefits. Approximately 12.34 percent of UI weeks claimed were not paid, and no nonseparation determinations were conducted. These unpaid weeks primarily involve claims where the claimant earnings from work exceeded SWA payment limits. SWAs made payments for 139.42 million weeks. SWAs completed 3.43 million nonseparation determinations and concluded that 2.80 million of those investigations should result in denial of benefits.

For the 2.40 million nonseparation denials included in the DCA population, BAM estimates an improper denial rate of 15.75 percent and when redeterminations and appeals reversals are taken into account, the adjusted improper denials rate is 11.59 percent.

Overpayments and Proper Denials

BAM determined that small percentages of the separation (0.09 percent) and nonseparation (0.87 percent) denials resulted in overpayments. Overpayments can occur if the period of disqualification for UI benefits was less than it should have been, and the claimant received compensation during the period that he or she should have been ineligible for benefits. Overpayments can also occur if the claimant received a partial payment that was too large. A nonmonetary determination may be issued only when there is a question on whether for a particular week: a) the claimant’s activities or status constitutes “service” or “employment,” or b) the claimant earns “wages” or receives “remuneration,” resulting in ineligibility as “not unemployed,” or only partially unemployed.
partial payment is a reduction in the claimant’s weekly benefit amount and is issued when the
claimant has earnings or other deductible income (such as pension, vacation, severance, and
SSI) for weeks that he or she claims UI benefits. For some of these compensated weeks, the
BAM audit identified additional income that reduced benefits further or in some cases
eliminated eligibility for benefits entirely.

For small percentages of all three types of denials, BAM concluded that the claimant was
properly denied but the agency committed a procedural error, such as basing the
determination on the wrong reason or section of the law or applying incorrect dates to the
period of denial. For example, a claimant may have been denied because of a monetary
determination that the claimant had earned insufficient wages in the minimum number of
weeks required by state law. The BAM audit determined that the claimant did meet the
minimum weeks test, but was still ineligible due to insufficient total wage credits earned in the
base period. For separation and nonseparation determinations, these errors typically involve
citing the wrong issue or the wrong section of the law in the determination (for example, quit
versus fired or availability versus reporting).

**DCA Rate Table**

The following table summarizes the DCA rates for the three denial categories described.

<table>
<thead>
<tr>
<th>IPIA 2013 US Denied Claims Accuracy Rates</th>
</tr>
</thead>
<tbody>
<tr>
<td>Denial Type</td>
</tr>
<tr>
<td>-------------</td>
</tr>
<tr>
<td>Monetary</td>
</tr>
<tr>
<td>Separation</td>
</tr>
<tr>
<td>Nonseparation</td>
</tr>
</tbody>
</table>

**DCA Rate Table Notes:**

In several states, the population from which the BAM DCA samples were selected may not
include all of the determinations that meet the definition for inclusion in the DCA population.
This limits the degree to which inferences about the population can be made from BAM DCA
data. States are in the process of resolving these population issues.

* Improper rate is the percentage of denied claims that BAM DCA concluded were erroneous,
whether or not official agency action was taken to issue payment or increase claimant’s WBA,
MBA or remaining balance.

** Adjusted improper rate excludes erroneous denials that were corrected by the agency and
claims for which eligibility was established on appeal prior to DCA case completion.

*** Properly denied, but BAM identified a procedural error, such as basing the determination on
the wrong reason or section of the law or applying an incorrect period of denial.

For a detailed listing of these rates for each state, click on the following link (note: the
spreadsheet may have several pages):

[IPIA_2013_Denied_Claims_Accuracy_&_Error_Rates.xlsx](IPIA_2013_Denied_Claims_Accuracy_&_Error_Rates.xlsx)
Monetary Denials and Alternative Base Period Redeterminations
Slightly more than one-third (34.2 percent) or 366,512 of the 1.04 million claimants in alternative base period (ABP) states that were monetarily denied received alternative base period consideration. Using a regular base period definition, a worker filing a UI claim cannot use wages earned in the current calendar quarter (filing quarter) or the most recent completed quarter (lag quarter) toward monetary eligibility or in calculating his or her UI weekly benefit amount. When states use an ABP, the worker who fails to qualify using the regular base period can use his or her more recent wages to meet the base period earnings requirement.

Through the enactment of the American Recovery and Reinvestment Act of 2009 (ARRA) (Pub. L. 111-5) on February 17, 2009, 41 SWAs (including the Virgin Islands) received incentive funding for implementation of ABPs. Each state’s application for incentive payments contained a certification that the application was submitted in good faith with the intention of providing benefits to unemployed workers who meet the eligibility provisions on which the application was based.

For a state to qualify for a UI Modernization incentive payment through ARRA, the state must determine whether an individual is eligible under an ABP if they do not have sufficient wage credits using the regular base period. Section 2003 of Pub. L. 111-5 says:

The State law of a State meets the requirements of this paragraph if such State law—

"(A) uses a base period that includes the most recently completed calendar quarter before the start of the benefit year for purposes of determining eligibility for unemployment compensation; or

(B) provides that, in the case of an individual who would not otherwise be eligible for unemployment compensation under the State law because of the use of a base period that does not include the most recently completed calendar quarter before the start of the benefit year, eligibility shall be determined [emphasis added] using a base period that includes such calendar quarter."

Because the law says "eligibility shall be determined", it is the agency’s responsibility to make the determination and the agency cannot put the onus on the individual to request that they do so.

Furthermore, Appendix A or B to the Code of Federal Regulations 20 CFR Parts 602, 614, 617, and 625, which is commonly known as the “Standard for Claim Determinations” provides a number of administrative actions to ensure payment when payment is due. This standard requires that the State must take the initiative to obtain the information necessary to make a determination, a record of facts considered must be maintained, and a monetary determination or redetermination notice must be issued. One would expect the standard for claim determinations to be applied to alternative base period monetary determinations in the same manner that it applies to regular base period monetary determinations.

Administratively, ABP monetary redeterminations pose significant challenges during the first 40 days after the end of a calendar quarter. Under normal circumstances, employers are not required to report the wages until 30 days after the end of quarter and those wages may not be posted for claim use for another 10 days. Based on this timing, the most recent quarter wages
are often not available for an ABP determination. In such circumstances, the agency must take special administrative actions to obtain information for new initial claims filed during this 40 day period. In other words, the monetary issue cannot be resolved from a review of the agency's records. Furthermore, internet claimstaking automation adds further complexity at detecting lag quarter wages.

However, BAM monetary denial case reviews have revealed that SWAs have adopted standards which vary from the Standard for a Claim Determinations and ARRA grant requirement. BAM data indicates that approximately 678,480 of the nearly 1.04 million or almost two of every three monetarily denied claimants in ABP states who should have received alternative base determination may not have received such consideration or the state agency had no record of consideration or that an ABP monetary (re)determination notice was never issued to the claimant.

*Includes denials made eligible by agency action prior to and during the investigation.

The BAM investigator captures the agency action until the denial case is closed.

In most cases, employer information is essential in situations where the state makes a monetary determination unless the claimant has provided sufficient and convincing information to enable the State agency to make a determination of eligibility (or ineligibility) without further inquiry.

Finally, the *Standard for Claim Determinations* stipulates: The agency must give each claimant a written notice of any monetary determination with respect to his benefit year.” (Emphasis added)

**Agency Action for Improper Denials**

Not every improper denial results in the agency issuing a payment to the claimant (or increasing the claimant's weekly benefit amount, maximum benefit amount, or dependents' allowance). Agencies or BAM took action to insure that benefits were paid for just over 72.4 percent of the improper monetary denials. However, 34.5 percent and 38.9 percent of the
claimants improperly denied for separation and nonseparation issues respectively, received benefits. In some cases, claimants are ineligible for payment due to other disqualifying issues. In other cases, the agency is precluded from taking action because of the time that has elapsed since the denial was issued (determination finality rules) or by other provisions of the law. BAM records the following agency actions:

- Official Action - Agency or BAM took action to issue payment;
- No Payment Due - Claimant was not entitled to payment due to other disqualifying issue or the claimant did not file a claim for the week(s), which were improperly denied;
- Other Improper - No official action could be taken due to finality or other provisions of state law prohibiting redetermination;
- Overpayment - Claimant received payment for weeks of unemployment to which he or she was not entitled; and
- Procedural Error - Claimant properly denied, but BAM identified a procedural error on the part of the agency such as applying the wrong section of the law.

The following graph summarizes the denial error rates by outcome and whether agency action was possible.

For a detailed listing of these rates for each state, click on the following link (note: the spreadsheet may have several pages):

IPIA_2013_Agency_Action_on_Improper_Denials_By_Denial_Type.xlsx
**Cause for Improper Denials**

The distribution of the causes of improper denials varies considerably among the three denial rates. The elements included or excluded from the various rates are controlled by business process definitions, and this influences the distribution.

For a detailed listing of these rates for each state, click on the following link (note: the spreadsheet may have several pages): [IPIA 2013 Improper Denials by Cause.xlsx](#)

**Responsibility for Improper Denials**

The party responsible for erroneous denials varies by type of denial determination. Employers were solely responsible for almost 19.8 percent of the erroneous monetary denials due to misreporting or underreporting employees’ wages. A small percentage of these improper monetary denials involved employers misclassifying claimants as independent contractors during the base period. Claimants were responsible for another 18.7 percent of the improper monetary denials, and agency error accounted for approximately 14.2 percent of the improper monetary denials.

The SWAs were solely responsible for 38.3 percent of the incorrect separation denials and 27.6 percent of the improper nonseparation denials. Employers and the SWAs were jointly responsible for just over 25.1 percent of the erroneous separation denials. Claimants were responsible for approximately 49.5 percent of the erroneous nonseparation denials.
Improper Denials by Prior Agency Action

Because the SWAs, either solely or jointly with other parties, are responsible for the majority of the erroneous nonmonetary denials and for a significant proportion of the monetary denials, it is instructive to examine agency action prior to the DCA investigation. Agencies had resolved or were in the process of resolving 26.1 percent of the erroneous monetary denials. However, 37.6 percent of the improper monetary denials could not be detected through the normal claims taking procedures. Typically, these are claims for which the employer incorrectly reported the wages or the claimant failed to inform the agency that he or she had out-of-state wage credits. Therefore, the agency issued the monetary denial based on the best information available at the time of the initial determination. For improper nonmonetary denials, the agency identified the issue but took the incorrect action for 54.5 percent of the improper separation determinations and 31.0 percent of the erroneous nonseparation determinations.

</tr>
</tbody>
</table>

Although the agency followed its procedures, the issue or information was undetectable for 20.4 percent of the improper separation determinations and slightly more than 41.3 percent of the erroneous nonseparation determinations. For these claims the agency issued its determination to deny eligibility based on information that, although incomplete, was the best available under normal procedures at the time of its decision.

IPIA_2013_Improper_Denials_by_Prior_Agency_Action.xlsx

Separation Issues

A majority of the separation denials concerned voluntary quits (VQ), representing 49.98 percent of the population, while discharges accounted for most of the balance.
“Other” separation denials include a small number of labor disputes, military separations, or claimants who were still job attached (partial unemployment). Claims that were denied for VQ issues were somewhat less likely to be in error (10.31 percent) than denials issued for discharge (10.76 percent). Separation denials that were based on “Other” issues were incorrect at far smaller rates.

The following table displays these separation error rates by type.

<table>

IPIA_2013_Denied_Claims_Accuracy_Separation_Determinations.xlsx
The largest category of nonseparation denials in IPIA 2013 concerns claimants failing to report when SWAs require them to provide information related to the UI claim or to receive reemployment services. Failing to report is followed by issues involving disqualifying income and availability. The remaining nonseparation denials are distributed among several issues, such as being unable to work, failing to conduct an active search for work, and other issues.

+Other includes refusal of suitable work, alien, athlete, school, seasonality issues.

The following table displays these nonseparation determination error rates by type.

+Other includes refusal of suitable work, alien, athlete, school, seasonality issues.

Determinations that denied eligibility because the claimant failed to meet the state’s reporting requirements had the highest error rate (18.42 percent), and represent the largest portion of denial population. Denials based on the claimant’s work search efforts represented the
smallest part of the denial population although the investigation found claimants were improperly denied 16.61% of the time.

The following chart shows improper nonseparation denial error rates by the type of issue.
