

Benefit Accuracy Measurement Methodology and Program Description

The Benefit Accuracy Measurement (BAM) program (before 1996 called Benefits Quality Control) is designed to determine the accuracy of paid and denied claims in three major Unemployment Insurance (UI) programs. It does this by reconstructing the UI claims process for samples of weekly payments and denied claims using data verified by trained investigators.

For claims that were overpaid, underpaid, or improperly denied, BAM determines the cause of and the party responsible for the error, the point in the UI claims process at which the error was detected, and actions taken by the agency and employers prior to the error. For erroneous paid claims, BAM determines the amount of benefits the claimant should have received.

The results of the BAM statistical samples are used to estimate accuracy rates for the populations of paid and denied claims. In addition, BAM is a diagnostic tool for Federal and State Workforce Agency (SWA) staff to use in identifying systemic errors and their causes and in correcting and tracking solutions to these problems.

Coverage

BAM covers the three largest permanently authorized unemployment compensation (UC) programs: State UI, Unemployment Compensation for Federal Employees (UCFE), and Unemployment Compensation for Ex-Service Members (UCX). BAM data for paid claims are available for the 50 states, the District of Columbia, and Puerto Rico from January 1988 through the present. BAM Denied Claims Accuracy (DCA), which investigates the accuracy of denied UC claims, began in August 2001.

Sample Design

State BAM samples are randomly selected from the populations of UI, UCFE, and UCX payments and determinations denying eligibility issued by the state each week. BAM refers to this weekly sampling interval as a batch. Each batch begins at midnight Sunday and runs until 11:59 p.m. Saturday. BAM records the number of UI weeks and dollars that were paid in the population from which the sample was selected and the number of denied claims for DCA so that the sample data can be weighted to make inferences concerning the population.

Sample Sizes

Before 1997, BAM paid claims sample sizes ranged from 400 to 1800 cases per year per state. Since 1997, allocated sample sizes range from 360 cases per year in the 10 states with the smallest UI workloads to 480 cases in the remainder of the states. Several states have chosen to select larger samples. For DCA, states sample 150 cases for each of the three types of denials -- monetary, separation, and nonseparation.

Database

The BAM database includes about 110 data elements for each sampled payment or denial. Data for 15 of these elements are captured twice (before and after the investigation), and eight are completed only for erroneous payments or denials. Aggregate data for each batch are collected for 42 additional data elements, most of which are demographic characteristics of the sample and population (Appendix A)

Methodology Considerations

Estimates based on BAM data are subject to the usual sampling and non-sampling errors that can affect survey data. BAM has implemented several quality assurance procedures to minimize non-sampling errors, such as incomplete or improperly defined sampling frames, errors of interpretation and data entry errors. Nonresponse bias is not significant. Nationally, BAM program staff gather sufficient information from claimants, employers and third parties to complete their investigations for over 99 percent of the UI payments that are sampled (response rates for DCA are somewhat lower); sample case completion rates are 100 percent in most states. When the program began, all BAM verifications were done in person. Since 1993, investigators may use telephone, mail, and fax to collect their data. Studies have shown that although such methods yield somewhat less information than in-person contacts, the overall accuracy rate estimates are not significantly affected.

To evaluate the accuracy of each sampled payment, the BAM program investigates the UI claimant's monetary and separation eligibility, as well as all information relevant to the compensated week of unemployment that was sampled, including the claimant's availability for work, efforts to find suitable work, and earnings from casual employment or other income sources, such as Social Security or pensions. Investigations of denied claims are limited to the issue for which eligibility was denied. For example, if a claimant was denied UC because of a voluntary quit separation issue, DCA will investigate only that issue, not the claimant's monetary or nonseparation eligibility. Both BAM paid and denied claims accuracy record demographic, UI program, and labor market data on each claimant. The BAM program does not maintain longitudinal data on the claimant's UI benefit history subsequent to the compensated week sampled.

Although claimant characteristics can be inferred from the data, it is important to keep in mind that the BAM paid claims sampling frames consist of payments. Claimants have an increased chance of selection to the BAM paid claims samples the longer they remain in the UI system and are paid benefits. Estimates of claimant characteristics that are correlated with duration of receiving benefits are subject to bias unless they are weighted to take into account the claimant's probability of sample selection.

Payment Error Codes

Payment error codes are provided for both underpayments and overpayments; the codes provide for multiple actions taken for a single issue, multiple issues detected for a single case, and various extents of agreement or disagreement between BAM and other units in the UI system concerning official policy or actions taken for the sampled cases. The payment error coding system records findings of case investigations that reflect the state's law and official (written) policies. The BAM payment error coding system encompasses appealable actions taken by any state unit, including BAM, which modify actions taken on payment errors, e.g., monetary redeterminations, establishment of overpayments, etc. It encompasses actions in progress by units other than BAM on improper Key Week payments, of which actions BAM is in

agreement. It also encompasses findings when no actions are permitted, e.g., because of state finality provisions.

BAM Integrity Rate Definitions

The following charts summarize the definitions for the integrity rates included in the BAM analyses.

Rate	Sample Type	Action Code	Cause
Overpayment* Rate without formal warnings (Rate shown without other SWA errors e.g. interstate activities)	1 - Paid Claims	10 - Fraud 11 - Non-fraud recoverable 12 - Non-fraud non-recoverable Excludes errors with action codes: 13 - Technically proper due to finality rules 14 - Work Search Formal Warnings – instances where state policy requires a warning before issuing a denial of benefits for the failure to conduct an active search for work. 15 - Technically proper due to rules other than finality or formal warning rule 16 - Overpayment established which was later "officially" reversed, revised, adjusted, or modified and BAM disagrees with "official" action (e.g., Appeals unit reverses BAM determination and BAM disagrees).	All cause codes.
Overpayment* * Rate with formal warnings (rate shown without other SWA errors (e.g. interstate activities))	1 - Paid Claims	10 - Fraud 11 - Non-fraud recoverable 12 - Non-fraud non-recoverable 14 - Work Search Formal Warnings – instances where state policy requires a warning before issuing a denial of benefits for the failure to conduct an active search for work. Excludes errors with action codes: 13 - Technically proper due to finality rules 15 - Technically proper due to rules other than finality or formal warning rule - Overpayment established which was later "officially" reversed, revised, adjusted, or modified and BAM disagrees with "official" action (e.g., Appeals unit reverses BAM determination and BAM disagrees).	All cause codes.

Fraud	1 - Paid Claims	10 - Fraud	All cause codes.
Agency Responsibility* *Rate shown without other SWA errors (e.g. interstate activities)	1 - Paid Claims	10 - Fraud 11 - Non-fraud recoverable 12 - Non-fraud non-recoverable Includes <u>only</u> those overpayments for which the agency had full or partial responsibility -- codes 30, 1030, 230, 34, 1230, 1034, 234, 1234.	All cause codes.
Underpayment		BAM investigation determines that the payment was too small:	All cause codes.

	1 - Paid Claims	20 - Supplemental check issued/offset applied or increase in weekly benefit amount (WBA), dependents' allowance (DA) entitlement, maximum benefit amount (MBA), or remaining balance (RB) Excludes errors with action codes: 21 - Technically proper due to finality rules 22 - Technically proper due to rules other than finality 23 - Supplemental check issued/offset applied which was later "officially" reversed, revised, adjusted, or modified, and BAM disagrees with the "official" action (e.g., Appeals unit reverses BAM determination and BAM disagrees) 24 - BAM determines payment was too small, but claimant is not entitled to payment due to collateral issues.	
BYE rate		10 - Fraud 11 - Non-fraud recoverable 12 - Non-fraud non-recoverable 15 - Technically proper due to rules other than finality or formal warning rule	Cause Codes 100 through 119 and 150 through 159
Work Search Rate		10 - Fraud 11 - Non-fraud recoverable 12 - Non-fraud non-recoverable	Cause codes 420 through 429
Work Search Rate including Formal Warnings		10 - Fraud 11 - Non-fraud recoverable 12 - Non-fraud non-recoverable 14 - Work Search Formal Warnings – instances where state policy requires a warning before issuing a denial of benefits for the failure to conduct an active search for work.	Cause codes 420 through 429

Denied Claims			
Rate	Sample Type	Action Code	Cause
		BAM investigation determines that the denial determination was improper or benefit payment was too small:	For Action codes 20-23: All causes <u>except</u> 700 - 739.
Improperly Denied	2 - Monetary 3 - Separation 4 - Nonseparation	20 - Official agency action finds the claimant to be eligible for a supplemental check issued/offset applied or increase in WBA, DA, MBA, or RB 21 - Technically proper due to finality rules 22 - Technically proper due to rules other than finality 23 - Supplemental check issued/offset applied which was later officially reversed, revised, adjusted or modified, and BAM disagrees with the official action	For Action code 24: 710-719: Claimant not entitled to benefits due to other issues affecting the claim

		24 - No payment is due to the claimant	720-729: Claimant not entitled to benefits because no week was claimed (Codes valid only for Sample Type 3 or 4)
		Same as Improperly Denied <u>minus</u> :	For Action codes 20-23:
Adjusted Improperly Denied	2 - Monetary 3 - Separation 4 - Nonseparation	Prior Agency Action codes 20-29: Agency was in the process of resolving issue and took correct action before DCA investigation completed or agency had correctly resolved issue prior to sample being selected	All causes <u>except</u> 700 - 739. For Action code 24: 710-719: Claimant not entitled to benefits due to other issues affecting the claim.
		– or –	
		Results of Appeal of Initial Determination codes 1 - affirmed, eligible; or 3 - reversed, eligible	720-729: Claimant not entitled to benefits because no week was claimed (Codes valid only for Sample Type 3 or 4)
Overpayment	3 - Separation 4 - Nonseparation	Action codes 10-16	All causes <u>except</u> 700 - 739.
Properly Denied	2 - Monetary 3 - Separation 4 - Nonseparation	Action Code 30	Cause codes 700-709

Published Findings

The Department of Labor has published BAM data by state along with supplementary analyses annually since 1988. From 1988 to 1995, the report was called the Unemployment Insurance Benefits Quality Control Annual Report; 1996 data were published in the UI Benefit Accuracy Measurement Annual Report. Since 1997 BAM data have been published as part of the UI PERFORMS Annual Report, which also includes data from the Benefit Timeliness and Quality program and the Tax Performance System. The BAM Analytical Report and UI Performs Annual

Report are available on the U. S. Department of Labor Employment and Training Administration Office of Unemployment Insurance Web site – <https://oui.doleta.gov/unemploy/bqc.asp>.

DATABASE DESCRIPTION

Naming Conventions

The DCA system utilizes the following naming conventions within the UI database:

- Each table will have a prefix of **b-dca-xxxx**. (The prefix's meaning is:
 '**b-**' = Benefits Accuracy Measurement and
 '**dca-**' = Denied Claims Accuracy.
- Each table will have the same base name as the BAM PCA accuracy tables. The base names are:
- **comparison** - The data characteristics table provides aggregate sample and population data for several demographic data elements.
- **master** - The primary table that consists of base record information.
- **errisu** - The error issue table contains information on the cause, responsibility, point of detection, and other data elements for improper denials.
- **Reopen** - The reopen table contains a record of any modification to a master record after the record has been closed by the supervisor.
- **Assigndate** - The assignment table contains the investigator's case assignment information with respect to his/her master record.

PAID CLAIMS ACCURACY TABLES	
Table Name	Table Type
b-comparison	Primary
b-master	Primary
b-errisu	Primary
b-assigndate	Primary
b-reopen	Primary

DENIED CLAIMS ACCURACY TABLES	
Table Name	Table Type
b-dca-comparison	Primary
b-dca-master	Primary
b-dca-errisu	Primary
b-dca-assigndate	Primary
b-dca-reopen	Primary

In addition to the five primary DCA tables, DCA also utilizes tables used by BAM paid claims accuracy software: **b-uaf**, **b-qcslo**, **b-batch**, **b-cre**, and **b-vallim**. The DCA software utilizes the **g-states** generic table as well.

Primary Keys:

FIELD	KEY	DEFINITION
batch	Primary	Batch identifies the year (YYYY) and week (WW) of the record. The format of the field is: YYYYWW.
seq	Primary	<p>Primary Sequence Number identifies the record number within the batch by sample type.</p> <p>Range of values: 1 - 99.</p> <p>At least two (2) sample cases are required for each batch and sample type because of statistical validity requirements.</p>
samptype	Primary	<p>Sample Type identifies the specific record type within the batch.</p> <p>1 - BAM paid claim 2 - Monetary denials 3 - Separation denials 4 - Nonmonetary nonseparation denials</p>

Example: **batch** = 201403; **seq** = 3; **samptype** = 2 identifies the record as the third sampled monetary denied case within the third week of 2014.

The following section identifies the elements contain in the database. Please see the ET Handbook No. 395 for definitions and element coding options.
